

PK-1

Over the years, Prolimatech PK-1 has become one of the hardware testers' favorite. It is not hard to see why. PK-1 is a premium grade of thermal compound that is easy to spread and is reliable throughout the year.

It will not dry out while continuing to provide good heat transfer from your CPU to your heatsink base. Performance-wise, Pk-1 is a contender for the top spot as it beat other major brands of thermal compound in the market. To maintain top condition, we highly recommend reapplying PK-1 every year.

feature

1. Excellent long-term stability
2. Non-electronically conductive
3. Non-corrosive Easy to apply and less to use
4. Easy to apply and less to use Low dry-out
